Web Dev × AI

How Artificial Intelligence is Changing the Way We Build for the Web

```
// build smarter
const ai = new Dev
  .useTools(
    Copilot,
    ChatGPT,
    Claude
  )
  .ship(faster);
```

Steve Jobs Academy · 2025

What is Web Development?

Frontend

Everything the user sees & interacts with.
HTML · CSS · JavaScript · React · Vue

Backend

Server logic, databases, APIs.
Node.js · Python · PHP · C#

Full-Stack

Frontend + Backend combined.
The most in-demand profile today.

The 3 Core Languages

HTML

Structure

Defines what is on a page.
Titles, paragraphs, buttons, images — all HTML.

```html
<h1>Hello, World!</h1>
<p>First web page.</p>
<button>Click me</button>
```

CSS

Style

Defines how it looks.
Colours, fonts, layout, animations.

```css
h1 {
  color: #00CFFF;
  font-size: 2rem;
  text-align: center;
}
```

JS

Behaviour

Makes it interactive.
Events, logic, API calls, dynamic content.

```js
btn.addEventListener(
  "click", () => {
    alert("Hello!");
  }
);
```

AI Enters the Chat

92%

of developers say AI tools
make them more productive.

— GitHub Developer Survey 2024

AI does NOT replace developers — it makes them faster.

What changed?

- ⚡ Code autocomplete inside the editor
- 🐛 AI explains and fixes bugs instantly
- 📝 Entire functions written from comments
- 🧪 Auto-generated tests and docs
- 💬 Ask questions, get code back

AI Tools Every Dev Should Know

🤖 GitHub Copilot

Code autocomplete & generation

Lives inside VS Code. Suggests full functions as you type. Trained on millions of repos.

🎨 v0 by Vercel

UI generation from plain text

Describe a component in English, get React + Tailwind code instantly.

💬 ChatGPT / Claude

Chat-based coding assistant

Explain errors, refactor code, generate boilerplate, ask architecture questions.

🔍 Perplexity

AI-powered dev search engine

Faster than Stack Overflow for specific coding questions. Cites sources.

A Modern Dev Workflow

1. Idea

Describe what you want to build

2. Design

Use AI to generate UI mockups

3. Code

Copilot writes boilerplate for you

4. Debug

Ask AI to explain the error

5. Ship

Deploy and iterate fast

What to Learn Next

🎓 Web Dev Path

1. HTML & CSS fundamentals
2. JavaScript (ES6+)
3. React or Vue.js
4. Node.js + Express (backend)
5. Databases: SQL or MongoDB
6. Version control with Git
7. Deploy on Vercel / Netlify

🤖 AI Skills to Add

1. Learn prompt engineering basics
2. Use Copilot daily — treat it as pair programming
3. Understand what LLMs can & can't do
4. Try building with an AI API (OpenAI, Anthropic)
5. Keep a human eye on every AI output
6. Stay updated — this space moves fast

Let's Talk! 💬

Q1

Have you ever used AI to write code?

Q2

Is AI a threat or an opportunity for devs?

Q3

Which AI tool would you try first?

Q4

What kind of website would you build with AI help?
